User manual Magnetic car

holder Cubenest S0C0

Package contents:

- 1× Magnetic holder
- 1× Holder for attachment to the ventilation grille
- 1x User Manual

1. Description of the device

Stylish and reliable holder compatible with MagSafe technology. Equipped with a **high-performance magnetic ring** to hold your iPhone firmly while driving, and a durable **carbon finish** to protect your device.

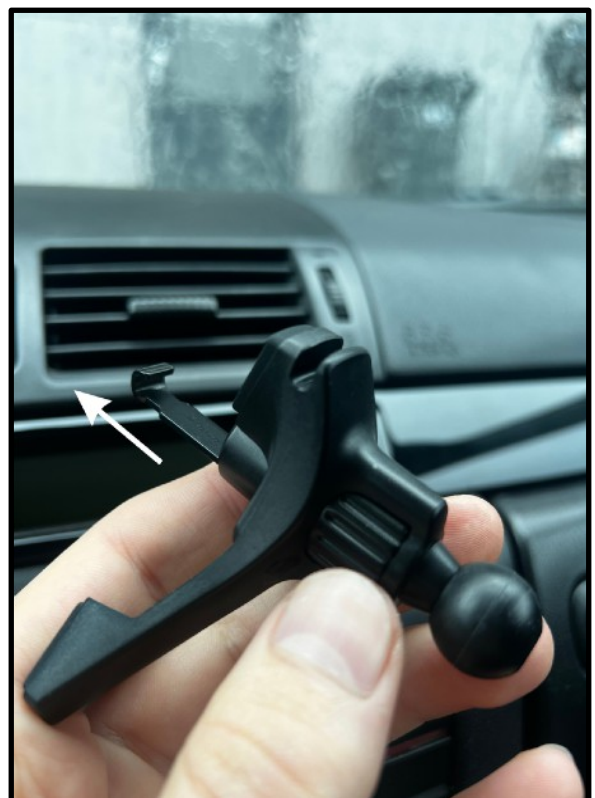

Product Specifications:

- **Model:** S0C0
 - **Compatible with MagSafe technology**
 - **Attachment:** 4-point system to the ventilation grille
 - **Material:** aluminum, plastic, carbon
 - **Can be used for attachment:**
iPhone 12 Pro Max, iPhone 12 Pro, iPhone 12, iPhone 12 mini, iPhone 13 Pro Max, iPhone 13 Pro, iPhone 13, iPhone 13 mini, iPhone 14 Pro Max, iPhone 14 Pro, iPhone 14 Plus, iPhone 14, iPhone 15 Pro Max, iPhone 15 Pro, iPhone 15 Plus, iPhone 15, iPhone 16 Pro Max, iPhone 16 Pro, iPhone 16 Plus, iPhone 16
(If you own an older model, a MagSafe-enabled case is required)
-

2. Instructions for use

Step 1: Installing the holder into the ventilation grille

1. Select a suitable location on the ventilation grille in your car.
2. Turn the thread **counterclockwise** to extend the hook on the back of the bracket to the desired length.

3. Insert the holder into the ventilation grille so that the hook **catches on the slat**.

4. Tighten the threads **clockwise** so that the bracket is firmly attached to the grille.

5. Place the plastic nut on the front of the bracket.

6. Slide the back of the holder with the magnetic face into the plastic nut, then screw the nut in until the connection is tight.

1. Place the MagSafe device on the holder.

Note: If you are using a cover, make sure it is **Magsafe compatible**.

Suitable for most ventilation grilles

3. Safety Instructions

⚠ ENSURE a firm fit into the ventilation

Before driving, check that the bracket is properly secured in the ventilation grille and does not slip.
Wrong

The bracket can fall off while driving and cause distraction to the driver.

⚠ DO NOT expose to high temperatures

Do not expose the bracket to direct sunlight for extended periods of time (e.g. behind a windshield) - extreme temperatures can affect the functionality of the magnet and material.

4. Frequently Asked Questions (FAQ)

? Is the charger compatible with Android phones?

✓ The magnetic holder is designed primarily for MagSafe enabled devices. If you are using a different phone, make sure it has a **MagSafe compatible** cover.

? How tightly does it hold my phone while driving?

✓ A strong magnet (1.4kgf) ensures a secure hold on the phone. The charger will not be hit by any sharp turn or pothole, your phone will stay firmly in place.

? Can I attach my iPhone with a protective case?

✓ Yes, as long as the MagSafe cover is compatible. Metal or thick cases can cause a weak fit on the mount.

5. Troubleshooting the most common problems

1. Weak magnetic hold on phone

- **Explanation:** poor magnetic attachment can be caused by an incompatible cover, poor centering of the phone, or dirt on the magnetic surface.
- **Solution:** use only a **MagSafe compatible** cover or a phone without a cover. Make sure, the phone is attached exactly to the center of the holder and the magnetic surface is clean.

2. The phone releases during driving

- **Explanation:** phone release while driving can be caused by a weak magnetic connection or vibrations from bumps in the road.
- **Solution:** make sure that the mount is correctly mounted in the ventilation grille and that the phone is correctly positioned on the charger.

3. Incompatibility with some phones

- **Explanation:** the holder is optimised for iPhones with MagSafe technology (iPhone 12 and later). Some phones of other brands or older models may not have integrated magnets.
- **Solution:** for use with incompatible phones, we recommend purchasing a **MagSafe compatible** cover.

4. Difficult to connect the phone to the holder

- **Explanation:** difficulty attaching the phone to the mount may be caused by inaccurate fit, a thicker or incorrectly positioned cover, or weak magnets on some models.
- **Solution:** make sure you place the phone exactly in the centre of the magnetic surface. If you're using a cover, make sure it's **MagSafe compatible** and doesn't have metal or thick layers that could interfere with the connection.

5. The phone moves or rotates while driving

- **Explanation:** sliding or rotating of the phone may be caused by a weak magnetic attachment, poor centering, or an unsuitable cover type.
- **Solution:** make sure the phone is properly centered on the mount and you are using a **MagSafe compatible** cover.
